

The Full-Stack Connected Building

Internet-ready | Network-ready | Wi-Fi-ready | Zero capex

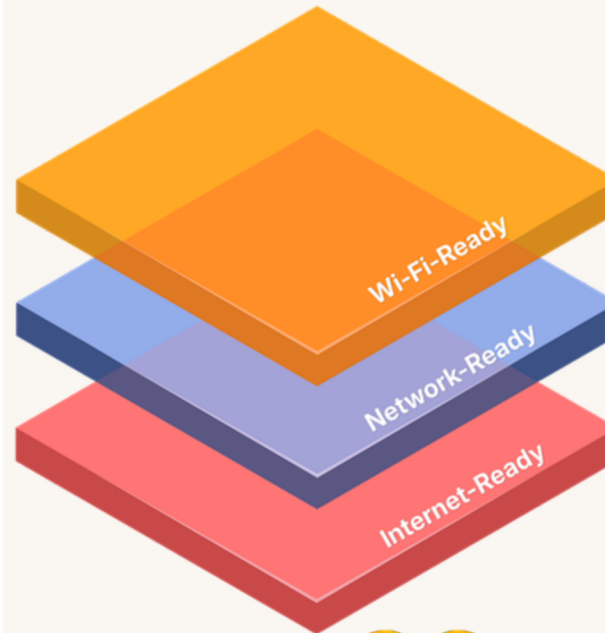

The problem with “connectivity” in most commercial buildings

Tenants don't just need internet in the building.

They need the full stack - a fibre backbone, a managed internal network, and enterprise Wi-Fi throughout their space.

Without all three, the building isn't truly connectivity-ready. And in a market where tenants have options, "not truly ready" means longer voids.

Two providers, one complete solution

Wi-Fi 7 access points across every floor, managed 24/7, automatic upgrades. Zero capex.

Enterprise switches, next-gen firewall, VLAN isolation per tenant. Monthly subscription

Gigabit fibre backbone pre-installed to every floor. Zero cost to the landlord.

What your building looks like on the other side

- ✓ Every tenant operational from move-in day - no waiting, no IT headaches, no drama
- ✓ Agents with a complete, confident story to lead every viewing
- ✓ A building positioned above the market - not just internet-ready, but fully connected
- ✓ Zero capital outlay - all funded through monthly subscription payments
